The Pfizer-BioNTech COVID-19 vaccine, also known as COMIRNATY® (COVID-19 Vaccine, mRNA)*

COMIRNATY (COVID-19 Vaccine, mRNA) is indicated for active immunization to prevent coronavirus disease 2019 (COVID-19) caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) in individuals 5 years of age and older.†

Instructions for Each Formulation Inside

- **12+ Dilute to use**
  - For 12 years and older, DILUTE BEFORE USE formulation: pages 4–5†

- **12+ Do not dilute**
  - For 12 years and older, DO NOT DILUTE formulation: pages 6–7†

- **5 to <12 Dilute to use**
  - For age 5 years to <12 years, DILUTE BEFORE USE formulation: pages 8–9†

* The Pfizer-BioNTech COVID-19 vaccine is now called COMIRNATY®. COMIRNATY® and the Pfizer-BioNTech COVID-19 vaccine have the same formulation and can be used interchangeably to provide the COVID-19 vaccination series.

† Vials of the Pfizer-BioNTech COVID-19 vaccine intended for individuals 12 years of age and older (purple cap/purple label border or gray cap/gray label border) cannot be used to prepare doses for individuals aged 5 years to <12 years, and the vials for individuals aged 5 years to <12 years (orange cap/orange label border) cannot be used to prepare doses for individuals 12 years of age and older.

When prepared according to their respective instructions, the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DILUTE BEFORE USE: purple cap and purple label border) and the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DO NOT DILUTE: gray cap and gray label border) can be used interchangeably to provide the COVID-19 vaccination series.

ULT: Ultra-low temperature. Adapted from the COMIRNATY Product Monograph.†

† Low dead-volume syringes and/or needles can be used to extract 6 or 10 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract 6 or 10 doses from a single vial.

‡ Vial labels and cartons may state that a vial should be discarded 6 hours after first use (gray vials) or dilution (orange vials). The information in the Product Monograph and here supersedes the number of hours printed on vial labels and cartons.

§ As a reminder, vials of the Pfizer-BioNTech COVID-19 vaccine with an expiry date of August 2021 through February 2022 printed on the label may remain in use for 3 months beyond the printed date as long as all approved storage conditions have been maintained.

To report product quality complaints or for more detailed instructions, please contact Pfizer Customer Service at 1-833-VAX-COVI (1-833-829-2684).

To report a side effect following immunization, please contact your local health unit or Pfizer Safety Department by calling 1-866-723-7111 or by fax at 1-855-242-5652, or visit www.pfizersafetyreporting.com.

is now the official name of the Pfizer-BioNTech COVID-19 vaccine (COVID-19 Vaccine, mRNA)
Before Dilution
Undiluted vials cannot be at room temperature (up to 25°C) for more than 2 hours (including thaw time). Do not refreeze thawed vials.

1. When vial is at room temperature, gently invert vaccine vial 10 times. Do not shake.
   - Inspect the liquid in the vial prior to dilution
   - The liquid is a white to off-white suspension and may contain white to off-white opaque amorphous particles. Do not use if discoloured or other particles are present

Dilution
2. Using aseptic technique, withdraw 1.8 mL of sterile 0.9% Sodium Chloride Injection, USP into a transfer syringe with a 21-gauge or narrower needle.
   - Only use sterile 0.9% Sodium Chloride Injection, USP as the diluent.
   - Do not use bacteriostatic 0.9% Sodium Chloride Injection or any other diluent.
   - Record the date and time of dilution on the vaccine vial label.

3. Cleanse the vaccine vial stopper with a single-use antiseptic swab. Add diluent to the vaccine vial. Do not add more than 1.8 mL of diluent to the vaccine vial.
   - Equalize vial pressure before removing the needle from the vial by withdrawing 1.8 mL of air into the empty diluent syringe
   - Discard any saline remaining in the diluent vial

The vial now contains six 0.3-mL doses of vaccine.

After Dilution
4. Gently invert the diluted vial 10 times to mix. Do not shake.
   - Inspect the liquid in the vial
   - The vaccine will be an off-white suspension. Do not use if vaccine is discoloured or contains particulate matter

5. Record the date and time of dilution on the vaccine vial label.
   - Diluted vaccine:
     - Can be handled in room light conditions. Avoid exposure to direct sunlight and ultraviolet light
     - Must be kept at temperatures between 2 to 25°C (35 to 77°F)
     - Should be discarded if not used within 6 hours from the time of dilution
     - Do not freeze or shake the diluted vaccine. If refrigerated, allow the diluted vaccine to come to room temperature prior to use

To prepare individual 0.3-mL doses for administration
1. Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab, and withdraw 0.3 mL of the diluted vaccine.
   - Adjustments to remove air bubbles should be done with the needle still in the vial to avoid loss of vaccine

2. Verify the final dosing volume of 0.3 mL, and confirm there are no particulates and that no discolouration is observed.
   - Irrespective of the type of syringe and needle used:
     - Each dose must contain 0.3 mL of vaccine
     - If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume
     - Do not pool excess vaccine from multiple vials

Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract 6 doses from a single vial.

3. Immediately administer the vaccine intramuscularly and no later than 6 hours after dilution.

4. Ensure the vaccine recipient/parent understands the vaccine is administered intramuscularly as a primary series of two doses (0.3 mL each), three weeks apart.
   - In individuals 18 years or older, a booster dose may be administered intramuscularly at least 6 months after completion of the primary series.
   - There are currently no data available from Pfizer and BioNTech clinical trials on the interchangeability of the Pfizer-BioNTech COVID-19 vaccine with other COVID-19 vaccines to complete the primary vaccination series or for a booster dose. Individuals who have received one dose of the Pfizer-BioNTech COVID-19 vaccine should receive all doses of the Pfizer-BioNTech COVID-19 vaccine to complete the vaccination series.
   - COMIRNATY and the Interim Order authorized Pfizer-BioNTech COVID-19 vaccine have the same formulation and can be used interchangeably to provide the COVID-19 vaccination series in individuals 12 years of age and older.
   - When prepared according to their respective instructions, the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DILUTE BEFORE USE: purple cap and purple label border) and the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DO NOT DILUTE: gray cap and gray label border) can be used interchangeably to provide the COVID-19 vaccination series.
   - Vials of the Pfizer-BioNTech COVID-19 vaccine intended for individuals 12 years of age and older (purple cap/purple label border or gray cap/gray label border) cannot be used to prepare doses for individuals aged 5 years to <12 years.

Please refer to the COMIRNATY Product Monograph for complete dosing and administration instructions.
Before Use

Thawed vials can be stored in the refrigerator for up to 10 weeks prior to use. Do not refreeze thawed vials.

1. When vial is at room temperature, gently invert vaccine vial 10 times. Do not shake.
   - Inspect the liquid in the vial prior to use
   - Prior to mixing, the thawed vaccine may contain white to off-white opaque amorphous particles
   - After mixing, the vaccine should appear as a white to off-white suspension with no visible particles
   - Do not use if liquid is discoloured or if particles are observed after mixing

The vial contains six 0.3-mL doses of vaccine.

2. Record the date and time of first vial puncture on the vaccine vial label.
   - Thawed vaccine:
     o Can be handled in room light conditions. Avoid exposure to direct sunlight and ultraviolet light
     o Must be kept at temperatures between 2°C to 25°C (35°F to 77°F)
     o Should be discarded if not used within 12 hours* after first puncture

To prepare individual 0.3-mL doses for administration

1. Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab, and withdraw 0.3 mL of the vaccine.
   - Adjustments to remove air bubbles should be done with the needle still in the vial to avoid loss of vaccine

2. Verify the final dosing volume of 0.3 mL and confirm there are no particulates and that no discoloration is observed.
   - Each dose must contain 0.3 mL of vaccine
   - If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume
   - Do not pool excess vaccine from multiple vials

Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract 6 doses from a single vial.

3. Immediately administer the vaccine intramuscularly and no later than 12 hours after first puncture.

4. Ensure the vaccine recipient/parent understands the vaccine is administered intramuscularly as a primary series of two doses (0.3 mL each) three weeks apart.

In individuals 18 years or older, a booster dose may be administered intramuscularly at least 6 months after completion of the primary series.

There are currently no data available from Pfizer and BioNTech clinical trials on the interchangeability of the Pfizer-BioNTech COVID-19 vaccine with other COVID-19 vaccines to complete the primary vaccination series or for a booster dose. Individuals who have received one dose of the Pfizer-BioNTech COVID-19 vaccine should receive all doses of the Pfizer-BioNTech COVID-19 vaccine to complete the vaccination series.

COMIRNATY and the Interim Order authorized Pfizer-BioNTech COVID-19 vaccine have the same formulation and can be used interchangeably to provide the COVID-19 vaccination series in individuals 12 years of age and older.

When prepared according to their respective instructions, the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DILUTE BEFORE USE: purple cap and purple label border) and the Pfizer-BioNTech COVID-19 vaccine for individuals 12 years of age and older (DO NOT DILUTE: gray cap and gray label border) can be used interchangeably to provide the COVID-19 vaccination series.

Vials of the Pfizer-BioNTech COVID-19 vaccine intended for individuals 12 years of age and older (gray cap/gray label border or purple cap/purple label border) cannot be used to prepare doses for individuals aged 5 years to <12 years.

Please refer to the COMIRNATY Product Monograph for complete dosing and administration instructions.

* Vial labels and cartons may state that a vial should be discarded 6 hours after first use. The information in the Product Monograph and here supersedes the number of hours printed on vial labels and cartons.
1. When vial is at room temperature, gently invert vaccine vial 10 times. Do not shake.
   - Inspect the liquid in the vial prior to dilution
   - The liquid is a white to off-white suspension and may contain white to off-white opaque amorphous particles.
   - Do not use if discoloured or other particles are present

Dilution
2. Using aseptic technique, withdraw 1.3 mL of sterile 0.9% Sodium Chloride Injection, USP into a transfer syringe with a 21-gauge or narrower needle.

   Only use sterile 0.9% Sodium Chloride Injection, USP as the diluent.
   - Do not use bacteriostatic 0.9% Sodium Chloride Injection or any other diluent.

3. Cleanse the vaccine vial stopper with a single-use antiseptic swab. Add diluent to the vaccine vial. Do not add more than 1.3 mL of diluent to the vaccine vial.
   - Equalize vial pressure before removing the needle from the vial by withdrawing 1.3 mL of air into the empty diluent syringe
   - Discard any saline remaining in the diluent vial

The vial now contains ten 0.2-mL doses of vaccine.

After Dilution
4. Gently invert the diluted vial 10 times to mix. Do not shake.
   - Inspect the liquid in the vial
   - The vaccine will be a white off-white suspension. Do not use if vaccine is discolored or contains particulate matter

5. Record the date and time of dilution on the vaccine vial label.
   - Diluted vaccine:
     - Can be handled in room light conditions. Avoid exposure to direct sunlight and ultraviolet light.
     - Must be kept at temperatures between 2 to 25°C (35 to 77°F)
     - Should be discarded if not used within 12 hours from the time of dilution
     - Do not freeze or shake the diluted vaccine. If refrigerated, allow the diluted vaccine to come to room temperature prior to use

To prepare individual 0.2-mL doses for administration
1. Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab, and withdraw 0.2 mL of the diluted vaccine.
   - Adjustments to remove air bubbles should be done with the needle still in the vial to avoid loss of vaccine

2. Verify the final dosing volume of 0.2 mL, and confirm there are no particulates and that no discolouration is observed.

   Irrespective of the type of syringe and needle used:
   - Each dose must contain 0.2 mL of vaccine
   - If the amount of vaccine remaining in the vial cannot provide a full dose of 0.2 mL, discard the vial and any excess volume
   - Do not pool excess vaccine from multiple vials

3. Immediately administer the vaccine intramuscularly and no later than 12 hours after dilution.

4. Ensure the vaccine recipient/parent understands the vaccine is administered intramuscularly as a primary series of two doses (0.2 mL each), three weeks apart.

   There are currently no data available from Pfizer and BioNTech clinical trials on the interchangeability of the Pfizer-BioNTech COVID-19 vaccine with other COVID-19 vaccines to complete the primary vaccination series or for a booster dose. Individuals who have received one dose of the Pfizer-BioNTech COVID-19 vaccine should receive a second dose of the Pfizer-BioNTech COVID-19 vaccine to complete the vaccination series.

   Vials of the Pfizer-BioNTech COVID-19 vaccine intended for individuals aged 5 years to <12 years (orange cap/orange label border) cannot be used to prepare doses for individuals 12 years of age and older.

Please refer to the COMIRNATY Product Monograph for complete dosing and administration instructions.
